

The Client

Department of Transport, Victoria

The Project

- New station building
- Flagstaff provided planning, engineering and constructability advice and input into design, construction and delivery implications in the preliminary design development phase prior to going to the market with a RFP

The Challenge

- Complex station building and platform interchange upgrade
- Need to maintain an operational station environment throughout the development

The Outcome

- Developed the foundation and concourse construction methodologies within an operating rail environment with various occupations, staging and planning assessments
- Conducted the investigation into modular type construction opportunities to reduce on-site works, especially with irregular and complex shapes in various materials
- Managed the heritage overlay consideration, stakeholder and rail operator consultation, maintaining access to MURLA tunnels and maintenance roads
